

## Better and Faster Communication

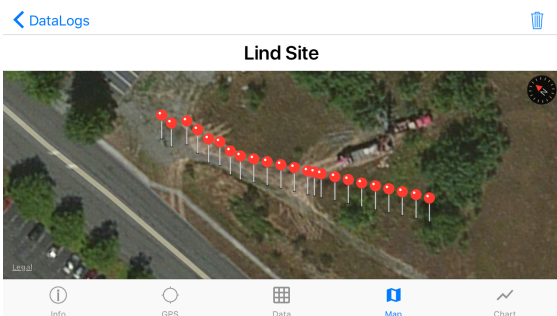

Logging and sharing the status of a pilot bore improves project communication.

Expedite billing by receiving data and generating reports before your crew even leaves the job site.

**DigiTrak DataLog Management (DDM)** is a subscription-based service that allows your crew to capture, manage, and store locating data from any F5 or F5+ locator to the cloud. DDM keeps everything in one place.

**Log all of the data** the locator captures with a click of the trigger: depth, pitch, fluid pressure, and GPS when using iGPS.

**Upload and review** data and maps on an Android or iOS smart device with our free **LWD Mobile** app.

**Store your data** to the cloud with DDM for easy access.

**Share detailed reports** with customers and inspectors for immediate approvals or proof of work.

DDM saves time at the jobsite and builds trust with crews and customers.

## Features at a Glance

- Log data from any F5 or F5+ locator
- Create professional and detailed reports with Google Map overlays
- View partial or complete bore data on a smart device at the jobsite or back at the office 24/7
- Add GNSS data to your data logs and reports with fully integrated iGPS
- Download our free LWD Mobile App

## Professional and Detailed Reporting

LWD reports can be customized to provide the level of detail your clients require including data tables, full-color charts, and map views.

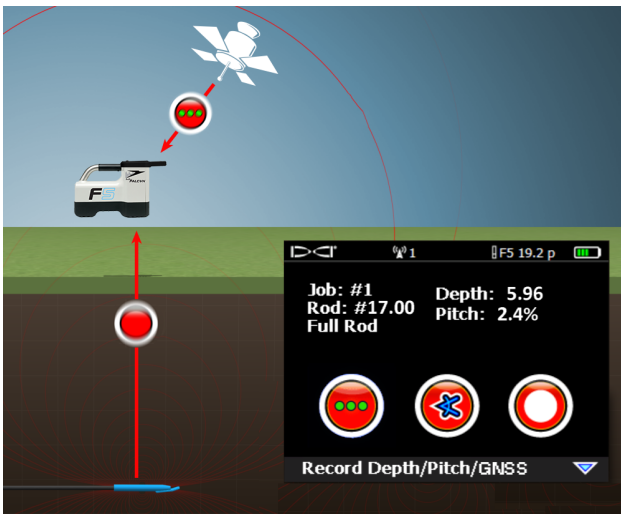

Enhance your companies relationship with customers with timely and attractive reports.

# DigiTrak DataLog Management (DDM)

## Add GPS Details to Your Data

**iGPS** is fully integrated with the Falcon F5 and F5+, and provides a cost-effective GNSS option with resolution down to sub-meter world-wide.

Match GNSS locations with underground depth measurements throughout the bore. Improve pre-bore planning using the whitelining capability.

The iGPS module snaps on to your Falcon F5 or F5+ and automatically adds GNSS data (latitude/longitude) to every rod with the ability to add annotations including pins, flags, and offset/deviation markers.

Upgrade your existing Falcon F5 or F5+ locator for iGPS or order your new Falcon F5+ iGPS-ready.

## Efficient and Convenient Access 24/7

Consolidate and store your drilling data in the cloud and provide secure and immediate access to authorized employees.

Maintain your DDM Subscription as part of your DCI resources at **MyDigiTrak.com**, including making easy PayPal payments and managing access to DDM.
